

■50 LPA Software Engineer Master Plan

1. Daily Study Schedule

Monday-Saturday (6-8 hours): DSA 2h, Development 3h, System Design 1h, Interview Prep 1h, Revision 1h.

Sunday: Weekly revision, project updates, mock interviews.

2. DSA Topic-by-Topic Plan

Month 1: Arrays, Strings, Hash Maps, Sorting, Searching.

Month 2: Linked Lists, Stacks, Queues, Recursion.

Month 3: Trees, BST, Heaps.

Month 4: Graphs, Backtracking, Dynamic Programming.

Target: 300-500 LeetCode problems.

3. React Roadmap

React Fundamentals, Hooks, Context API, Redux Toolkit, React Query.

Advanced: Performance Optimization, Lazy Loading, Code Splitting, Next.js.

Projects: Dashboard, E-commerce Frontend, School ERP Frontend.

4. Node.js Roadmap

Node.js Fundamentals, Express.js, REST APIs, JWT Authentication.

MongoDB, PostgreSQL, Validation, Logging, Security, Testing.

Advanced: Microservices, Redis, Message Queues.

5. System Design Roadmap

Low-Level Design: SOLID Principles, Design Patterns, OOP.

High-Level Design: Load Balancer, Cache, Database Scaling, CAP Theorem.

Design Systems: WhatsApp, Uber, YouTube, URL Shortener.

6. AWS Roadmap

EC2, S3, IAM, RDS, CloudFront, Route53.

Docker, ECS, Lambda, Monitoring, CI/CD Pipelines.

7. Interview Preparation Checklist

JavaScript, React, Node.js, DBMS, Operating Systems, Networking.

Mock Interviews twice weekly.

Resume optimization and GitHub portfolio.

8. Project Milestones

Project 1: School ERP System.

Project 2: Library Management System.

Project 3: Bus Ticket Booking System.

Project 4: E-commerce Marketplace.

Deploy all projects using AWS and Docker.

9. ■50 LPA Strategy

Year 1: Build strong fundamentals and secure 6-12 LPA role.

Year 2-3: Switch to product companies, target 15-25 LPA.

Year 4-6: Master system design and leadership skills, target 30-50+ LPA.

Continuously contribute to GitHub, build production-grade projects, and network with engineers.
